

Table A1: Determinants of the College Wage Premium: 1914 to 2017

	(1)	(2)	(3)	(4)
(College/high school) supply	-0.592 (0.070)	-0.619 (0.077)	-0.640 (0.057)	-0.651 (0.071)
(College/high school) supply × post-1949				0.0111 (0.0414)
Time	0.00472 (0.00182)	0.0102 (0.00205)	0.0106 (0.0015)	0.0111 (0.0026)
Time × post-1949	0.0197 (0.0011)			
Time × post-1959		0.0161 (0.0010)	0.0160 (0.0008)	0.0154 (0.0022)
Time × post-1992	-0.00769 (0.00135)	-0.00971 (0.00156)	-0.00938 (0.00117)	-0.00940 (0.00118)
1949 Dummy			-0.136 (0.021)	-0.143 (0.035)
Constant	-0.592 (0.148)	-0.694 (0.163)	-0.717 (0.122)	-0.742 (0.156)
R ²	0.953	0.945	0.970	0.970
Number of observations	59	59	59	59

Sources and Notes: Each column is an OLS regression of the college wage premium on the indicated variables using a sample covering the years 1914, 1939, 1949, 1959, and 1963 to 2017.

Standard errors are given in parentheses below the coefficients. The college wage premium is a fixed weighted average of the estimated college (exactly 16 years of schooling) and post-college (17+ years of schooling) wage differential relative to high school graduates (those with exactly 12 years of schooling). (College/high school) supply is the log supply of college equivalents to high school equivalents both measured in efficiency units. “Time” is measured as years since 1914. The samples used include workers from 16 to 64 years old. The data for 1963 to 2017 are from the 1964 to 2018 March CPS samples. The college wage premium and relative supplies in efficiency units for 1963 to 2017 use the same data processing steps and sample selection rules as those described in the data appendix to Autor, Katz, and Kearney (2008). The college wage premium for 1963 to 2017 uses the log weekly earnings of full-time, full-year workers. The college wage premium series is the same as plotted in Figure 1. The observations for 1914, 1939, 1949, and 1959 append the changes in the college wage premium series from 1915 to 1970 (actually 1914 to 1969) plotted in Figure 8.1 of Goldin and Katz (2008) to the 1969 data point from the March Current Population Survey (CPS) series. The log relative supply observations for 1914 to 1959 similarly append changes in the relative supply of college equivalents from 1914 to 1939 for Iowa and for the United States from 1939 to 1949, 1949 to 1959, and 1959 to 1969 from the Census Integrated Public Use Micro-data samples (IPUMS) using the efficiency-units measurement approach of Tables 8.5 and 8.6 of Goldin and Katz (2008).
